

CUSTOMER SUCCESS STORY

Aerospace Distribution Industry

CHALLENGE:

- Incoming Purchased Good must be opened and inspected prior to inventory – per FAA
- Reduce touches during handling of parts
- 70lbs wheels limit which operators can handle due to weight/ergonomics

SOLUTION:

- Design Kitting Cart as dual-purpose transport and inspection cart station
- Telescoping shelf serves as table
- Slide wheels for inspection and transport and load to pallet racking without lifting

IN THEIR WORDS

“The inspection and delivery of these wheels has been an ongoing challenge for the warehouse. Geolean developed a cart to support the entire process of picking, inspection, and even loading into pallet racks on a single cart, without lifting. The time savings is remarkable along with the obvious safety and ergonomic benefits”
